Additional Information

Registration of Toxic Effects of Chemical Substances: SM2100000

Inhalation can cause the formation of methemoglobin in the human body, which can lead to pale skin disease at a certain concentration. It usually occurs 2-4 hours or more later, depending on the duration and intensity of contact. The degree of stimulation ranges from mild to severe tissue damage. Long term or frequent exposure can cause damage to the eyes. To our knowledge, the chemical, physical, and toxic properties of this substance have not been fully studied.
